

Large Animal Medicine Residency – Farm Animal Focus

The overall goal of this three-year residency program is to provide training and experience to qualify the candidate for certification by the American College of Veterinary Internal Medicine (ACVIM). This program is approved by ACVIM, follows the General Information Guideline (GIG) from ACVIM (www.ACVIM.org) for training residents, and is directed by 5 LAIM diplomates of ACVIM (3 equine, 2 farm animal). The annual total “in house” large animal caseload ranges from 3000-4000 animals/year, and is comprised of approximately 60% horses, 40% Farm animal species (cattle, sheep, goats, pigs, llamas and alpacas). Of the total “in house” hospital caseload, approximately 50% of the cases are assigned to the equine or farm animal medicine service.

Didactic training is available to residents in various forms, including residents/intern seminars, college conferences and rounds. Seminars in various specialties are also offered regularly, such as ophthalmology, cardiology, radiology, oncology and critical care and emergency medicine. Additional exposure to journal clubs, morbidity and mortality rounds, pathology rounds, and ethics rounds are also available. When appropriate, residents will participate in teaching through lectures and laboratory exercises to veterinary students in pre-clinical and clinical settings.

The resident will participate in clinical service during all three years of the program with increasing responsibility that includes primary case management and assisting faculty in the instruction and supervision of veterinary students. Time on clinic duty will be divided between the farm animal medicine and surgery (60%) and equine medicine (40%) services with opportunity for rotations in field services, equine surgery, theriogenology, equine rehabilitation, ophthalmology, and other areas of the hospital. The farm animal medicine and surgery service offers individual animal care for production and pet farm animals including beef and dairy cattle, sheep and goats, llamas/alpacas, swine, and alternative livestock. There will be approximately 46 weeks on clinics during the first year, and 38 – 40 weeks on clinic duty during the second and third years. Medicine residents perform in-house emergency duties on a rotating basis with other residents (approx. 6) and interns (approx. 3) under the guidance of an emergency clinician. Each resident is required to conduct a research project during the residency. If desired, residents are encouraged to enter a combined residency-graduate program (PhD, MS, MPH).

Admission to the second and third years of the program is contingent upon successful completion of each preceding year. Residents are expected to complete requirements for ACVIM board certification as the residency progresses, including completion of the resident research project, and examinations. Residents are given 10 days of vacation per year and share holiday schedules with other interns and residents. Financial support is provided for residents to attend regional or national meetings during the residency. Residents are encouraged to present papers at state, regional, and specialty meetings. Residents are provided up to \$3,000 during the 3-year program to support expenses associated with travel and registration for these experiences. Additional funds are made available if presenting a scientific abstract. The start date for the program is July 15, 2021 and will end on July 15, 2024 unless entry into a graduate program is chosen. The starting stipend is \$28,000/year with a \$500 increase each year. A parking fee of \$30/month is charged by the University of Tennessee parking services and health insurance is available for \$90/month.

The University of Tennessee Large Animal Teaching Hospital is a new, state-of-the-art, fully equipped facility with all the diagnostic and therapeutic equipment required for referral practice, including video endoscopy, ultrasonography, nuclear medicine, radiology, MRI, CT, and laparoscopy. We have had 100% success rate in completion of the program in the past 10 years and 80% success rate in obtaining diplomate status within 3 years of program completion by those completing residencies over the past 10 years.

The University of Tennessee, Institute of Agriculture, is committed to equal employment opportunity and affirmative action. Due to funding limitations, this program is open only to the following applicants:

- United States Citizens or United States Permanent Residents (those holding a "green" card)
- Those that do not require a VISA to work in the United States
- Those eligible for a Mexican or Canadian NAFTA Professional Worker(TN)VISA

The College provides neither assistance for nor support for obtaining such Employment Authorization.

For more details or if you would like to schedule a visit, please contact the program director at the University of Tennessee. If you cannot schedule a visit, please contact residents currently within the program or those that have recently completed the program. Our departmental web site address is

The following are supervising diplomates of this residency program.

Carla Sommardahl, DVM, PhD, DACVIM-LA, Program Director
csommard@utk.edu

Melissa Hines, DVM, PhD, DACVIM-LA
mhines8@utk.edu

Karen McCormick, DVM, DACVIM-LA
k.mccormick@utk.edu

Ricardo Videla, DVM, MS, DACVIM-LA
rvidela@utk.edu

For all candidates, it is important to note that the program described herein has been approved by the ACVIM, however the ACVIM only has jurisdiction over the assurance of the institution's ability to attain minimal standards as set by the ACVIM for board certification. The sponsoring institution provides funding for the position and therefore residency training programs approved by the ACVIM are not transferrable to other institutions. Further details on the ACVIM approved programs can be obtained at:

<http://www.acvim.org/BoardCertification/ResidencyTraining/LAIM/ResidencyTrainingPrograms-LAIM.aspx>.

Additional fees for board certification are required by the ACVIM and for 2021-2022 include: Candidate registration: \$315; General Exam: \$985 new and \$675 retake; Credentials: \$585; Specialty Examination: \$1435 new and \$1055 retake.
